

July 2008 „Oder-Odra VII“: German-Polish workshop and exhibition at „Kunstbauwerk Vierraden“

„Moon night at the Observatory“, space-installation / detail

Installation in the frame of the ongoing international and interdisciplinary exhibition project „Simplex Komplex“, conceived by Jerzy Olek and Witold Szymanski.

19 – 26 July 2008: Workshop with German and Polish artists in a historic tobacco factory in Vierraden near the river Oder, followed by an exhibition of the results.

*“Is space only three-dimensional? Maybe there exist numerous spaces of different dimensions parallel to each other - as is claimed by physicists. Therefore, we have developed the flexible construction „Simplex Komplex“ as a model for multi-dimensionality that should inspire artists to invent subjective and unconventional interpretations of space”.*

Jerzy Olek and Witold Szymański

During the workshop in the old tobacco factory I have based my numerous ideas on the beautiful building. Its construction details and the light streaming in through window on all sides created continuously changing spatial illusions, shadow images and geometric forms.

„Moon night at the Observatory“ was installed on the top floor of the building that resembles a sacral space, caused by high windows.

„Shadows and Structures“ / selection

I have patterned several of those windows with different structures and materials and used the natural light and my shadow for a sequence of photographs.
